

**UPGRADE
YOUR LIFT
QUICKLY,
EASILY
AND WITH
CONFIDENCE.**

When it's time to modernise your lift, choosing the lift control system is only one part of the equation.

From our experience, we've identified 4 key factors you must consider when you're modernising your existing lift:

Suitability: Is the equipment capable of the job I need it to do?

Support: What happens if something goes wrong?

Quality: Will the equipment be reliable and maintain safety?

Value for Money: Does the equipment offer value for money over the short and long term?

Our DMG Lift Control Systems have provided these four key elements for the last ten years. Lift professionals continuously recognise and acknowledge Shorts' DMG product as one of the industry's leading lift controllers. With over 5,000 units installed and operating in the UK and Ireland alone, it is easy to see the trust that has been placed in it.

We are also recognised in the lift industry for our speed and efficiency. Once ordered, we specify, build, test and dispatch our stock DMG lift control system in an average of 14 days, giving us the industry's leading modernisation turnaround. This lean process allows projects to be completed on time or sooner and for the lift to be returned to service earlier. The leading turnaround saves you time and money while reducing the inconvenience and complaints received from having a lift "out of service".

Our latest DMG PB4 Lift Controller continues this vital role with its state-of-the-art solution. It brings advanced technology to your lift, improving its reliability, safety, smoothness, and operational ease. All while significantly reducing the installation time with its plug-and-play connectors when compared with previous screw terminal connections.

BENEFITS OF THE PB4 LIFT CONTROLLER

STATE-OF-THE-ART SOLUTION: IMPROVING RELIABILITY, SAFETY, SMOOTHNESS, AND OPERATIONAL EASE

Enhanced Performance & Reliability

The PB4 is designed with cutting-edge technology, ensuring smooth, efficient lift operation, reducing breakdowns, and minimising maintenance needs. Whether you're managing a residential or multi-floor building, this controller delivers reliable and consistent performance that you can rely on daily.

Tailored to Your Lift

Our stock PB4 Lift Controller is tailored to your specific lift system within our UK-based facility. This allows us to customise the system to meet your requirements, whether for a small home lift or a large commercial property.

More complex and bespoke solutions are also available directly from our partner, DMG.

Faster Turnaround & Local Support

Together with your lift maintenance provider, we understand that keeping your lift operational is essential. Our UK-based team is dedicated to providing full support throughout the lifetime of your lift controller.

Our local expertise means a quicker turnaround and faster support for installations and repairs. With same-day dispatch for spare-parts from our UK warehouse and an average build time of 14 days, you can avoid long delays that disrupt your building's operations, reducing the inconvenience and complaints received from residents, other passengers, or users.

AVERAGE 14-DAY TURNAROUND: REDUCING THE INCONVENIENCE AND COMPLAINTS

Safety First

The PB4 is designed to meet the latest European safety standards, including the EU Lift Directive and EN81-20/50. With its precise stopping accuracy and intelligent data processing, you can be confident that your lift is continuously operating safely and efficiently.

Flexible Modernisation Options

Whether you need to modernise a single lift or a complex multi-lift system, the PB4 offers a modular and flexible design suitable for various configurations. We offer complete solutions for different types of lifts, including MR Gearless, MRL All-In-One, MRL Star, and hydraulic systems.

Convenient Technical Support

You benefit from more than advanced technology when you choose the PB4 Lift Controller. Your lift maintenance provider has access to our dedicated UK support team, who provide expert advice, fast troubleshooting, and timely replacements if needed. With our local team, you can be confident that your lift is in good hands.

Furthermore, your lift maintenance provider can access DMG's online knowledge base, DIDO, which provides interactive manuals, tutorials, how-tos, and troubleshooting advice for an even quicker solution when required.

Predictive Maintenance for Peace of Mind

The PB4's intelligent software continuously monitors lift performance, identifying potential issues before they cause a failure. This means fewer unexpected breakdowns, saving you money on emergency repairs and reducing downtime. Early alerts ensure that your lift maintenance provider carry out repairs efficiently and with minimal disruption.

Advanced Connectivity for Easy Management

The PB4 Controller integrates with the latest communication technology, enabling technicians to easily monitor, diagnose, and optimise your lift system with their mobile device. Features like Wi-Fi and 4G connectivity for real-time performance monitoring make maintenance faster and more convenient.

Quality You Can Trust

Each PB4 controller is meticulously tested and certified to meet the highest quality and safety standards. Manufactured by DMG in Italy and supported locally, we provide a robust, reliable system designed to last.

Value You Can Feel

An outdated lift controller cannot support modern components that continuously monitor the movement of your lift. Modernising your lift control system can be felt through increased reliability, efficiency, safety, and comfort for lift passengers. Therefore, it is essential to ensure you invest in a system that is suitable for today's technology and future-proofed for upcoming developments.

NEXT STEP?

Please get in touch with your lift maintenance provider to learn more about how our DMG Lift Control System can improve the reliability, safety, smoothness, and operational ease of your existing lift while reducing its downtime. They will guide you through the entire modernisation project and are experts in understanding your needs and requirements beyond the lift controller.

Together, we will ensure we specify and design the perfect lift control system for your lift and application.
